As a company which has been in [Free CISA-KR Practice Exams](#) this field for over ten year, we have become a famous brand.

NEW QUESTION: 1

- A. Network
- B. Application
- C. Session
- D. Data-Link
- E. Physical

Answer: D

Explanation:

CDP is a protocol that runs over Layer 2 (the data link layer) on all Cisco routers, bridges, access servers, and switches. CDP allows network management applications to discover Cisco devices that are neighbors of already known devices, in particular, neighbors running lower-layer, transparent protocols. With CDP, network management applications can learn the device type and

the SNMP agent address of neighboring devices. This feature enables applications to send SNMP queries to neighboring devices. In this case, the line protocol is up which means that the physical layer is operational (layer 1) but the data link layer is not.

Reference: "Configuring CDP"
