B. The SoO is checked at the egress of the backdoor link.

F. During the import process, the SoO value in BGP is checked against the SoO value of the nite map.

Answer: D,F

* SoO checking:

- At reception of EIGRP update, the SoO value in the EIGRP update is checked against the SoO value of nite-map attached to the incoming interface. This update is accepted only if there is no match (this check can optionally be done on backdoor router).
