NEW QUESTION: 1

Which one of the following authentication mechanisms creates a problem for mobile users?

- A. one-time password mechanism.
- B. Mechanism with reusable passwords
- C. challenge response mechanism.
- D. Mechanisms based on IP addresses

Answer: D

Explanation:

Anything based on a fixed IP address would be a problem for mobile users because their location and its associated IP address can change from one time to the next. Many providers will assign a new IP every time the device would be restarted. For example an insurance adjuster using a laptop to file claims online. He goes to a different client each time and the address changes every time he connects to the ISP.

NOTE FROM CLEMENT: The term MOBILE in this case is synonymous with Road Warriors where a user is constantly traveling and changing location. With smartphone today that may not be an issue but it would be an issue for laptops or WIFI tablets. Within a carrier network the IP will tend to be the same and would change rarely. So this question is more applicable to

devices that are not cellular devices but in some cases this issue could affect cellular devices as well. The following answers are incorrect: mechanism with reusable password. This is incorrect because reusable password mechanism would not present a problem for mobile users. They are the least secure and change only at specific interval. one-time password mechanism. This is incorrect because a one-time password mechanism would not present a problem for mobile users. Many are based on a clock and not on the IP address of the user. challenge response mechanism. This is incorrect because challenge response mechanism would not present a problem for mobile users.

NEW QUESTION: 2

The IT department is currently upgrading all SQL Server Integration Services (SSIS) packages to SSIS 2012. The final version of a complex SSIS 2005 package has been overwritten. Four prior versions of the package exist. Each of the prior versions contains a different part of the final solution. You have backups of all associated project files. You need to create an updated package as quickly and accurately as possible.

What should you do? (More than one answer choice may achieve the goal. Select the BEST answer.)

- A.** Use an XML editing tool to merge the compatible changes of the package versions by comparing the package refID fields. Upgrade the merged version.
- B.** Upgrade the four package versions. Use SSIS Designer to visually compare the package versions, determine the compatible changes, and copy the compatible tasks into a single package.
- C.** Use the DataSet.Merge method to merge the compatible changes of the package versions by using the Lineage IDs. Upgrade the merged version.
- D.** Upgrade the four package versions. Use an XML editing tool to merge the compatible changes of the package versions by comparing the package refID fields.

Answer: D

NEW QUESTION: 3

You are a network administrator of an Active Directory domain named contoso.com.

You have a server named Server1 that runs Windows Server 2012 R2. Server1 has the DHCP Server server role and the Network Policy Server role service installed.

You enable Network Access Protection (NAP) on all of the DHCP scopes on Server1. You need to create a DHCP policy that will apply to all of the NAP non-compliant DHCP clients.

Which criteria should you specify when you create the DHCP policy?

- A. The vendor class
- B. The client identifier
- C. The relay agent information
- D. The user class

Answer: D

Explanation:

Explanation/Reference:

Explanation:

To configure a NAP-enabled DHCP server

On the DHCP server, click Start, click Run, in Open, type dhcpgmt. smc, and then press ENTER.

In the DHCP console, open <servername>\IPv4.

Right-click the name of the DHCP scope that you will use for NAP client computers, and then click

Properties.

On the Network Access Protection tab, under Network Access Protection Settings, choose Enable for

this scope, verify that Use default Network Access Protection profile is selected, and then click OK.

In the DHCP console tree, under the DHCP scope that you have selected, right-click Scope Options,

and then click Configure Options.

On the Advanced tab, verify that Default User Class is selected next to User class.

Select the 003 Router check box, and in IP Address, under Data entry, type the IP address for the

default gateway used by compliant NAP client computers, and then click Add.

Select the 006 DNS Servers check box, and in IP Address, under Data entry, type the IP address for

each router to be used by compliant NAP client computers, and then click Add.

Select the 015 DNS Domain Name check box, and in String value, under Data entry, type your

organization's domain name (for example, woodgrovebank. local), and then click Apply. This domain is a full-access network assigned to compliant NAP clients. 10.On the Advanced tab, next to User class, choose Default Network Access Protection Class.

11.Select the 003 Router check box, and in IP Address, under Data entry, type the IP address for the default gateway used by noncompliant NAP client computers, and then click Add. This can be the same default gateway that is used by compliant NAP clients. 12.Select the 006 DNS Servers check box, and in IP

Address, under Data entry, type the IP address for each DNS server to be used by noncompliant NAP client computers, and then click Add.

These can be the same DNS servers used by compliant NAP clients. 13. Select the 015 DNS Domain Name check box, and in String value, under Data entry, type a name to identify the restricted domain (for example, restricted. Woodgrovebank.local), and then click OK. This domain is a restricted-access network assigned to noncompliant NAP clients. Click OK to close the Scope Options dialog box.

Close the DHCP console.
