NEW QUESTION: 1

You are setting up your first Amazon Virtual Private Cloud (Amazon VPC) network so you decide you should probably use the AWS Management Console and the VPC Wizard. Which of the following is not an option for network architectures after launching the "Start VPC Wizard" in Amazon VPC page on the AWS Management Console?

- A. VPC with a Single Public Subnet Only
- B. VPC with a Public Subnet Only and Hardware VPN Access
- C. VPC with a Private Subnet Only and Hardware VPN Access
- D. VPC with Public and Private Subnets and Hardware VPN Access

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Amazon VPC enables you to build a virtual network in the AWS cloud -no VPNs, hardware, or physical datacenters required. Your AWS resources are automatically provisioned in a ready-to-use default VPC. You can choose to create additional VPCs by going to Amazon VPC page on the AWS Management Console and click on the "Start VPC Wizard" button.

You'll be presented with four basic options for network architectures. After selecting an option, you can modify the size and IP address range of the VPC and its subnets. If you select an option with Hardware VPN Access, you will need to specify the IP address of the VPN hardware on your network. You can modify the VPC to add more subnets or add or remove gateways at any time after the VPC has been created.

The four options are:

VPC with a Single Public Subnet Only

VPC with Public and Private Subnets

VPC with Public and Private Subnets and Hardware

VPN Access VPC with a Private Subnet Only and Hardware VPN Access

NEW QUESTION: 2

A Solutions Architect is developing a new web application on AWS. The services must scale to support an increasing load. The Architect wants to focus on software development and deploying new features rather than provisioning or managing servers. Which AWS service is appropriate?

- A. CloudFormation
- B. Elastic Beanstalk
- C. EC2 Container Service
- D. Auto Scaling

Answer: B

Explanation:

Explanation/Reference:
