NEW QUESTION: 1
Management of a company is attempting to build a reputation as a world-class manufacturer of quality products. Which of the following measures would not be used by the firm to measure quality?
A. The percentage of shipments returned by customers because of poor quality.
B. The percentage of products passing quality tests the first time.
C. The number of defective parts per million.
D. The number of parts shipped per day.
Answer: D
Explanation:
The number of parts shipped per day would most likely be used as a measure of the effectiveness and efficiency of shipping procedures, not the quality of the product. This

measure does not consider how many of the parts are defective.

NEW QUESTION: 2

A. Option A
B. Option D
C. Option B
D. Option C
Answer: C

NEW QUESTION: 3
Which product provides the standard communication protocols
(for example, HTTPS) between the Client Tier and the Service
Tier as well as Message Security?
A. Application Development Framework
B. Oracle platform Security Services
C. Oracle WebCenter
D. Oracle HI IP Server
Answer: B
Explanation:
Explanation/Reference:
Oracle Platform Security Services comprises Oracle WebLogic
Server's internal security framework and Oracle's security
framework (referred to as Oracle Platform Security). OPSS
delivers security as a service within a comprehensive,
standards-based security framework.
The Security Services includes SSL: Hypertext Transfer Protocol
Secure (HTTPS) is a combination of Hypertext Transfer Protocol
(HTTP) with SSL/TLS protocol.
Note: Oracle Platform Security Services (OPSS) provides
enterprise product development teams, systems integrators
(SIs), and independent software vendors (ISVs) with a
standards-based, portable, integrated, enterprise-grade
security framework for Java Standard Edition (Java SE) and Java
Enterprise Edition (Java EE) applications.
OPSS provides an abstraction layer in the form of
standards-based application programming interfaces (APIs) that
insulate developers from security and identity management
implementation details. With OPSS, developers don't need to
know the details of cryptographic key management or interfaces
with user repositories and other identity management
infrastructures. Thanks to OPSS, in-house developed
applications, third-party applications, and integrated
applications benefit from the same, uniform security, identity
management, and audit services across the enterprise.
OPSS is the underlying security platform that provides security
to Oracle Fusion Middleware including products like WebLogic
Server, SOA, WebCenter, ADF, OES to name a few. OPSS is
designed from the ground up to be portable to third-party

application servers. As a result, developers can use OPSS as the single security framework for both Oracle and third-party environments, thus decreasing application development, administration, and maintenance costs.
Incorrect answers:
C: In computing, Oracle Application Development Framework, usually called Oracle ADF, provides a commercial Java framework for buildingenterprise applications. It provides visual and declarative approaches to Java EE development. It supports rapid application development based on ready-to- use design patterns, metadata-driven and visual tools.
