- A. AWS Trusted Advisor
- B. AWSConfig

- C. AWS Resource Access Manager
- D. AWS Systems Manager

**Answer: B**

**NEW QUESTION: 2**

You need to recommend a remote access solution that meets the VPN requirements.

Which role service should you include in the recommendation?

- A. DirectAccess and VPN (RAS)
- B. Routing
- C. Host Credential Authorization Protocol
- D. Network Policy Server

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

Scenario:

A server that runs Windows Server 2012 will perform RADIUS authentication for all of the VPN connections.

Ensure that NAP with IPsec enforcement can be configured. Network Policy Server

Network Policy Server (NPS) allows you to create and enforce organization-wide network access policies

for client health, connection request authentication, and connection request authorization. In addition, you

can use NPS as a Remote Authentication Dial-In User Service (RADIUS) proxy to forward connection

requests to a server running NPS or other RADIUS servers that you configure in remote RADIUS server

groups.

NPS allows you to centrally configure and manage network access authentication, authorization, and client

health policies with the following three features: RADIUS server. NPS performs centralized authorization,

authorization, and accounting for wireless, authenticating switch, remote access dial-up and virtual private

network (VPN) connections. When you use NPS as a RADIUS server, you configure network access

servers, such as wireless access points and VPN servers, as RADIUS clients in NPS. You also configure

network policies that NPS uses to authorize connection requests, and you can configure RADIUS

accounting so that NPS logs accounting information to log files on the local hard disk or in a Microsoft SQL

Server database.
