A return relative is

- A. Total return
- B.  $1 / \text{Total return}$
- C. Total return +1
- D.  $1 + 1 / \text{Total return}$

**Answer: C**

**NEW QUESTION: 4**

Topic 1, Consolidated Messenger

Background

Business Scenario

You are the lead architect, developer, and web administrator of SharePoint 2013 for your company, Consolidated Messenger.

Consolidated Messenger is a national company with hundreds of franchises. Consolidated Messenger focuses on bicycle-based courier services in metropolitan areas.

Consolidated Messenger sells franchises to franchisees.

Franchisees have three user types:

Technical Scenario

When a franchisee purchases a franchise, they are provided with: - access to Consolidated Messenger's SharePoint 2013 multi-tenant farm located at

<https://sp.consolidatedmessenger.com> - access to a Customers list in the Corporate site collection, named CorporateSiteCollection, which includes a list of all Customers across all franchisees - a single site collection for each franchisee, named FranchiseeSiteCollection - an unlimited number of customer subsites for each franchisee Consolidated Messenger has funded the creation of three apps.

## Solution Architecture Site Collection Structure

### SharePoint Farm Design

My Sites are not created for each Franchisee unless they are requested.

### Business Requirements Technical Requirements

Each Franchise site collection must include a SharePoint document library to store CSV files.

#### FranchiseMonitor App

##### Application Design

Franchise employees use Microsoft Excel 2013 to create a list of pick-up and drop-off locations for each bicycle courier for each day. The spreadsheet is named Appointments.csv.

##### Business Requirements

The FranchiseMonitor app must allow a Franchise employee to upload Appointments.csv to a SharePoint document library in each Franchisee site collection, and send Appointments.csv to the CloudManager app.

##### Technical Requirements

- The FranchiseMonitor app must display the courier's location on the bicycle courier's microfeed on the SharePoint farm if the courier has remained stationary for more than three minutes.

- The FranchiseMonitor app must be listed on the Site Contents page of the host web.
- The FranchiseMonitor app must use claims-based authentication, once launched, to authenticate the franchisee against an API provided by Margie's Travel.
- The FranchiseMonitor app must be deployed to all site collections by the SharePoint administrator.
- The FranchiseMonitor app must be immediately available to be installed on websites within the tenancy on a website-by-website basis to any tenant contained in the SharePoint farm.
- The FranchiseMonitor app must be able to create lists within SharePoint to store records of the CSV files so that they may be sent to the CloudManager app.

#### CourierMobile App

Application Design - Each bicycle courier for each franchise is provided a Microsoft Surface Pro device with LTE. Most bicycle couriers do not return their Microsoft Surface Pro devices back to their franchise locations nightly.

- The CourierMobile app runs on the bicycle courier's Microsoft Surface Pro device.
- Margie's Travel provides an API to enable external developers to authenticate by using OAuth and claims-based authentication.

Many couriers are members of Margie's Travel. - The CourierMobile app receives Microsoft Outlook appointments and Outlook appointment cancellations from the CloudManager app. The appointments include the address of the location for pick-up or drop-off.

Business Requirements - The CourierMobile app must display a Bing map to display route data when Outlook appointments or appointment cancellations are received. - The CourierMobile app must capture the location of the Microsoft Surface Pro device on a regular interval. This data must be captured regardless of whether the device has connectivity. - The CourierMobile app must be able to connect to the SharePoint Customers list and verify whether the account belongs to the franchisee to avoid pickups or deliveries to customers that do not belong to the franchisee. When the CourierMobile app accesses the Customers list, it must only read its contents with the minimum permissions necessary.

Technical Requirements - The CourierMobile app must provide the ability to authenticate by using the courier's Microsoft account or the Margie's Travel API. - The CourierMobile app must include a custom sign-in page that includes branding from Consolidated Messenger and Margie's Travel, based on the authentication provider selected by the user. - The CourierMobile app must be able to capture more than 30 million data points of location data daily as they occur and upload the location data to the cloud when connected to the Internet.

#### CloudManager App

##### Application Design

CloudManager processes two sets of data: - Updates to the list of appointments received from the FranchiseMonitor app - Geo-location data received from the CourierMobile app

##### Business Requirements

The CloudManager app must implement business logic that parses Appointments.csv and geo-location data and sends Appointments or Appointment cancellations to the CourierMobile app.

##### Technical Requirements

- The CloudManager app must elastically scale to capture courier location data as the number of bicycle couriers increases or decreases. - The CloudManager app must process bicycle courier location data from a data store capable of storing more than 30 million items.

##### Solution Code

MyClaimsProvider.cs

AppManifest.xml for Franchise Monitor app

=====

You need to ensure that the CourierMobile app determines whether the franchisee owns the account.

What should you do?

**A.** Use OAuth and App+User security. Request the Read right from the `http://sharepoint/content/sitecollection` scope URI.

**B.** Use the SharePoint user credentials of the bicycle messenger

to connect to SharePoint and read from the Accounts list in the site collection.

**C.** Use `SPSecurity.RunWithElevatedPrivileges` to connect to SharePoint and read from the Accounts list in the site collection.

**D.** Use OAuth and App only security. Request the Read right from the `http://sharepoint/content/sitecollection/web/list` scope URI.

**Answer: A**

Explanation:

\* SharePoint uses three types of authorization policies. The user-only policy requires only that the call to SharePoint include an authenticated user identity. The apponly policy requires only that the call include only an authenticated app identity. The user+app policy requires that the call include both kinds of authenticated identities.

\*You may have already heard that OAuth 2.0 plays an important role in the authentication and authorization of apps for SharePoint. It does, but it is not necessarily a part of the authorization story for every app for SharePoint. If you plan to build an app for SharePoint that runs in a remote web application and communicates back to SharePoint using server-side code, you will need to use OAuth.

Scenario:

\*The CourierMobile app must be able to connect to the SharePoint Customers list and verify whether the account belongs to the franchisee to avoid pickups or deliveries to customers that do not belong to the franchisee. When the CourierMobile app accesses the Customers list, it must only read its contents with the minimum permissions necessary.

\*Margie's Travel provides an API to enable external developers to authenticate by using OAuth and claims-based authentication. Many couriers are members of Margie's Travel

Reference: Authorization and authentication of apps for SharePoint 2013 Some franchisees want to launch the FranchiseMonitor app from a link named Launch Franchise Monitor that is displayed next to the name of the user who is currently logged in. Other franchisees do not want to have the link present. The link must be contained within the same out-of-the-box control, as shown in the screenshot below:
