NEW QUESTION: 1

A. Option C

B. Option B
C. Option A
D. Option E
E. Option D
Answer: B
Explanation:
Explanation
The Source and Destination IP address is not going to change.
Host 1 IP address will stay as being the source IP and the Host
2 IP address will stay the destination IP address. Those two
are not going to change.
For the MAC address it is going to change each time it goes
from one hope to another. (Except switches... they don't change
anything) Frame leaving HOST 1 is going to have a source MAC of
Host 1 and a destination MAC of Router 1.
Router 1 is going to strip that info off and then will make the
source MAC address of Router1's exiting interface, and making
Router2's interface as the destination MAC address.
Then the same will happen... Router2 is going to change the
source/destination info to the source MAC being the Router2
interface that it is going out, and the destination will be
Host2's MAC address.

NEW QUESTION: 3
Refer to the exhibit.

This is the configuration of the ASBR of area 110.Which option
explains why the remote ABR should not translate the type 7 LSA
for the prefix 192.168.0.0/16 into a type 5 LSA?
A. The ASBR sets the forwarding address to 0.0.0.0 which
instructs the ABR not to translate the LSA into a type 5 LSA.
B. The remote ABR translates all type 7 LSA into type 5 LSA,
regardless of any option configured in the ASBR.
C. The ABR clears the P bit in the header of the type 7 LSA for
192.168.0.0/16.
D. The ASBR originates a type 7 LSA with age equal to MAXAGE
3600.
Answer: C
Explanation:

When external routing information is imported into an NSSA, LSA Type 7 is generated by the ASBR and it is flooded within that area only. To further distribute the external information, type 7 LSA is translated into type 5 LSA at the NSSA border. The P-bit in LSA Type 7 field indicates whether the type 7 LSA should be translated. This P-bit is automatically set by the NSSA ABR (also the Forwarding Address (FA) is copied from Type 7 LSA). The P-bit is not set only when the NSSA ASBR and NSSA ABR are the same router for the area . If bit P = 0, then the NSSA ABR must not translate this LSA into Type 5. he nssa-only keyword instructs the device to instigate Type-7 LSA with cleared P-bit, thereby, preventing LSA translation to Type 5 on NSSA ABR device. NotE. If a router is attached to another AS and is also an NSSA ABR, it may originate a both a type-5 and a type-7 LSA for the same network. The type-5 LSA will be flooded to the backbone and the type-7 will be flooded into the NSSA. If this is the case, the P-bit must be reset (P=0) in the type-7 LSA so the type-7 LSA isn't again translated into a type-5 LSA by another NSSA ABR.
