Kim Heldman, CompTIA Project+ Study Guide, 2nd Edition, Sybex,
Indianapolis, 2017, p. 326

NEW QUESTION: 4
Automatic registration of devices with the SteelCentral
Controller for SteelHead (SCC) requires which one of the
following?
A. Pre-trusted SSL certificates on the devices and SCC
B. RiOS 8.0 for SteelHead and 4.0 for Interceptor
C. The serial number of the managed device to be preconfigured
in the SCC
D. The name "riverbedcmc" to be an entry in DNS resolving to
the SCC primary IP address
E. The SCC must have joined the Windows domain
Answer: D
Explanation:
See last paragraph below.
To use automatic registration, prepare the appliance for
registration with the SCC by entering the IP address or
DNS-registered hostname of the SCC when you run the
configuration wizard on the appliance. Riverbed recommends that
you set up your DNS servers to resolve riverbedcmc to the
primary interface IP address of your SCC. If you configure your
DHCP servers to forward the correct DNS settings, any appliance
added into the network and powered on should automatically
register with the SCC.
Alternatively, you can use the cmc enable and cmc hostname
commands. If you do not change the default hostname, it remains
riverbedcmc.
