Answer: B

NEW QUESTION: 3

You write the following method (line numbers are included for reference only):

You need to ensure that the method extracts a list of URLs that match the following pattern:

```
@http://(www\.)?([
Related Posts\.]+)\.com;
Which code should you insert at line 07?
```

- A. Option B
- B. Option D
- C. Option A
- D. Option C

Answer: D

Explanation:
Explanation/Reference:
Explanation:
MatchCollection

Represents the set of successful matches found by iteratively applying a regular expression pattern to the input string. The collection is immutable (read-only) and has no public constructor. The Regex.Matches method returns a MatchCollection

object.

List<T>.Add Method

Adds an object to the end of the List<T>.

Incorrect Answers:

B: The MatchCollection.GetEnumerator method returns an enumerator that iterates through a collection.

However, To iterate through the members of the collection, you should use the collection iteration (foreach) instead of retrieving the enumerator that is returned by the GetEnumerator method.
