Answer: A

NEW QUESTION: 3

A project manager obtains approval of an important deliverable. Later, while reviewing the monthly progress report, they notice that that deliverable's status has been changed back to "pending." It is discovered that a new request for approval was submitted by the client team.

What should the project manager do first to avoid this problem in the future?

- A.** Request that deliverable statuses are only updated according to the project team
- B.** Document this in the issue log and review the stakeholder engagement plan
- C.** Review the scope management plan and distribute it to the client team
- D.** Identify this issue as a new risk and escalate it to the project sponsor

Answer: B

NEW QUESTION: 4

Given:

```
class Car implements TurboVehicle, Steerable {
// Car methods &gt; interface Convertible
{
// Convertible methods
}
public class SportsCar extends Car implements Convertible {
}
```

Which statement is true?

- A.** Instances of car can invoke convertible methods.
- B.** SportsCar must implement methods define by convertible.
- C.** SportsCar must override methods defined by car.
- D.** SportsCar must implement methods from TurboVehicle and steerable

Answer: B

Explanation:

To declare a class that implements an interface, you include an implements clause

in the class declaration.

By convention, the implements clause follows the extends clause, if there is one.

Here are the some point that must be considered while implementing an interface (or interfaces) into a java class.

A class implementing an interface must either implement all the methods of that interface

otherwise known as the abstract class.

A class in java may extend at most one superclass because java

does not allow multiple inheritance, by it may implement more than one interface. Multiple inheritance in java is achieved through the interfaces.

When a class implements more than one interface then implement statement requires a comma-separated list of interfaces to be implement by that class.
