NEW QUESTION: 1
Note: This question is part of a series of questions that use the same or similar answer choices. An
answer choice may be correct for more than one question in the series. Each question is
independent of the other questions in this series. Information and details provided in a question
apply only to that question.
You have two servers named Server1 and Server2 that run Windows Server 2016. Server1 and Server2

have the Hyper-V server role installed.
An iSCSI SAN connects to the network.
You create a LUN on the SAN and configure both servers to connect to the iSCSI target.
You create a failover cluster and add Server1 and Server2 to the cluster. You connect both servers to the
iSCSI target and format the shared storage.
You need to add the shared storage to the cluster. The solution must ensure that virtual machines running
on both nodes can access the shared storage simultaneously.
Which tool should you use?
A. the cluster.exe command
B. the configurehyperv.exe command

NEW QUESTION: 3
CORRECT TEXT
Building Business Processes Describe the VLOOKUP Formula Function.
Answer:
Explanation:
The
VLOOKUP function returns a value by looking up a related value

in a custom object. This function checks against a key and returns a value from that key. Similar to theVLOOKUP () function in Microsoft Excel. For example, users can check the state and zip code entered in a record against a table of states and zip codes to ensure that the state and zip code match.
