**NEW QUESTION: 1**

Which operating system installation methods are available in intelligent Provisionning? (Choose 3)

- A. Recommended
- B. Customized
- C. Interactive
- D. Manual
- E. Assited

**Answer: A,B,D**

Explanation:

Select an installation method.

Depending on the OS family selected, installation choices vary, including the suggested default. Options may include:

Recommended - Uses HP-defined defaults to configure the server software and firmware, partition storage, and install the operating system with HP drivers. HP recommends selecting this option for first-time server setup.

Customized - Enables you to individually configure the options for server software and firmware updates, storage partitioning, and operating system installation with HP drivers. Select this option if you have specific parameters, such as for storage partitioning, that differ from the recommended settings.

Choosing a customized installation also allows you to choose SNMP or WBEM management protocols. For information about these options, see "Installing Management Protocols" (page 19).

Manual - Provides critical boot drivers for the manual installation of an operating system from a vendor, using a CD/DVD. After selecting this option, insert the provided CD/DVD so that the server can reboot from the OS CD/DVD. If you are installing a Linux operating system, you must choose the Manual installation

When using the Manual installation method, the Virtual Installation Disk (VID) is enabled automatically. With the OS running, a new drive is displayed in "My Computer" (for example, VID(E) drive). VID contains a limited set of storage drivers, so non-critical drivers may not be present in manual installation. To disable VID, reboot the server and press

**NEW QUESTION: 2**

Which Easy Tier feature should be utilized for a DR site to ensure equivalent performance after a fail over?

- A. Manual Mode
- B. Heat Map Transfer
- C. Space Reservation Manager
- D. Automatic Mode

**Answer: B**

**NEW QUESTION: 3**

Which audit technique provides the BEST evidence of the segregation of duties in an IS department?

- A. Review of the organization chart
- B. Testing of user access rights
- C. Discussion with management
- D. Observation and interviews

**Answer: D**

Explanation:

Explanation/Reference:

Explanation: By observing the IS staff performing their tasks, an IS auditor can identify whether they are performing any

incompatible operations, and by interviewing the IS staff, the auditor can get an overview of the tasks performed. Based on the observations and interviews the auditor can evaluate the segregation of duties. Management may not be aware of the detailed functions of each employee in the IS department; therefore, discussion with the management would provide only limited information regarding segregation of duties. An organization chart would not provide details of the functions of the employees. Testing of user rights would provide information about the rights they have within the IS systems, but would not provide complete information about the functions they perform.
