NEW QUESTION: 1
Your infrastructure divided in 2 sites. You have a forest root domain and child domain. There is only one DC on site 2 with no FSMO roles. The link goes down to site 2 and no users can log on. What FSMO roles you need on to restore the access?
A. Domain Naming master
B. RID master
C. PDC Emulator
D. Infrastructure master
Answer: C
Explanation:
Explanation
D. The PDC emulator is used as a reference DC to double-check incorrect passwords and it also receives new password changes. PDC Emulator is the most complicated and least understood role, for it runs a diverse range of critical tasks. It is a domain-specific role, so exists in the forest root domain and every child domain. Password changes and account lockouts are immediately processed at the PDC Emulator for a domain, to ensure such changes do not prevent a user logging on as a result of multi-master replication delays, such as across Active Directory sites.

What is called an attack where the attacker spoofs the source IP address in an ICMP ECHO broadcast packet so it seems to have originated at the victim's system, in order to flood it with REPLY packets?
A. Ping of Death attack
B. Smurf attack
C. Denial of Service (DOS) attack
D. SYN Flood attack
Answer: B
Explanation:
Although it may cause a denial of service to the victim's system, this type of attack is a Smurf attack. A SYN Flood attack uses up all of a system's resources by setting up a number of bogus communication sockets on the victim's system. A Ping of Death attack is done by sending IP packets that exceed the maximum legal length (65535 octets).
