NEW QUESTION: 2

An effective information security policy should not have which of the following characteristics?

- A. Include separation of duties.
- B. Be designed with a short-to mid-term focus.
- C. Be understandable and supported by all stakeholders.
- D. Specify areas of responsibility and authority.

Answer: B

Explanation:

Explanation: This is not a very good practice, specially for the CISSP examination, when you plan and develop the security policy for your enterprise you should always plan it with a long term focus. The policy should be created to be there for a long time, and you should only make revisions of it every certain time to comply with changes or things that could have changed.

In a security policy the duties should be well specified, be understandable by the people involved in it, and specify areas of responsibility.

Answer: A

Explanation:

Explanation

Refer AWS documentation - S3 Server logs

To turn on log delivery, you provide the following logging configuration information:

* The name of the target bucket where you want Amazon S3 to save the access logs as objects. You can have logs delivered to any bucket that you own that is in the same Region as the source bucket, including the source bucket itself. We recommend that you save access logs in a different bucket so that you can easily manage the logs. If you choose to save access logs in the source bucket, we recommend that you specify a prefix for all log object keys so that the object names begin with a common string and the log objects are easier to identify. When your source bucket and target bucket are the same bucket, additional logs are created for the logs that are written to the bucket. This behavior might not be ideal for your use case because it could result in a small increase in your storage billing. In addition, the extra logs about logs might make it harder to find the log that you're looking for.
