Your network contains an Active Directory domain named Adatum.com. All servers run Windows Server 2012.

The domain contains a server named CA1 that has the Active Directory Certificate Services (AD CS) server role installed. CA1 is configured as a standalone root certification authority

(CA).

You have a server named Web1 that has the Web Server (IIS) server role installed. You publish the certificate revocation list (CRL) from CA1 to Web1.

You are creating a disaster recovery plan for CA1.

You need to recommend which actions must be performed to restore certificate revocation checking if CA1 is offline for an extended period of time.

Which three actions should you recommend? To answer, move the three appropriate actions from the list of actions to the answer area and arrange them in the correct order.
