well-organized way to compile the frequently tested points and the latest heated issues all into our C_THR81_2111 exam dumps files.

You are only able to support these changes if you are SAP certified.

NEW QUESTION: 1

A router running EIGRP has learned the same route from two different paths.

Which parameter does the router use to select the best path?

- A. administrative distance
- B. metric
- C. cost
- D. as-path

Answer: B

Explanation:

If a router learns two different paths for the same network from the same routing protocol, it has to decide which route is better and will be placed in the routing table. Metric is the measure used to decide which route is better (lower number is better). Each routing protocol uses its own metric.

For example, RIP uses hop counts as a metric, while OSPF uses cost.
