NEW QUESTION: 3
DRAG DROP
Select and Place:

Answer:
Explanation:

NEW QUESTION: 4
A security analyst, Ann, is reviewing an IRC channel and notices that a malicious exploit has been created for a frequently used application. She notifies the software vendor and asks them for remediation steps, but is alarmed to find that no patches are available to mitigate this vulnerability. Which of the following BEST describes this exploit?
A. Malicious add-on
B. Zero-day
C. Client-side attack
D. Malicious insider threat
Answer: B
Explanation:
Explanation/Reference:
Explanation:
A zero-day vulnerability refers to a hole in software that is unknown to the vendor. This security hole is then exploited by hackers before the vendor becomes aware and hurries to fix it-this exploit is called a zero-day attack. Uses of zero day attacks can include infiltrating malware, spyware or allowing unwanted access to user information. The term "zero day" refers to the unknown nature of the hole to those outside of the hackers, specifically, the developers. Once the vulnerability

becomes known, a race begins for the developer, who must protect users.
In this question, there are no patches are available to mitigate the vulnerability. This is therefore a zero-day vulnerability.
