D. ãƒ—ãƒ-ã‚¸ã‚§ã‚¯ãƒˆç®¡ç•†è¨ˆç”»ã‚'作æˆ•ã•—ã•¾ã•™ã€,
Answer: B

NEW QUESTION: 2
You plan to map a network drive from several computers that run Windows 10 to Azure Storage. You need to create a storage solution in Azure for the planned mapped drive.
What should you create?
A. a Blobs service in a storage account
B. a virtual machine data disk
C. an Azure SQL database
D. a Files service in a storage account
Answer: D
Explanation:
Explanation
Azure Files is Microsoft's easy-to-use cloud file system. Azure file shares can be seamlessly used in Windows and Windows Server.
To use an Azure file share with Windows, you must either mount it, which means assigning it a drive letter or mount point path, or access it via its UNC path.
Unlike other SMB shares you may have interacted with, such as those hosted on a Windows Server, Linux Samba server, or NAS device, Azure file shares do not currently support Kerberos authentication with your Active Directory (AD) or Azure Active Directory (AAD) identity, although this is a feature we are working on. Instead, you must access your Azure file share with the storage account key for the storage account containing your Azure file share. A storage account key is an administrator key for a storage account, including administrator permissions to all files and folders within the file share you're accessing, and for all file shares and other storage resources (blobs, queues, tables, etc) contained within your storage account.

NEW QUESTION: 3
Your multitenant container database (CDB) contains pluggable databases (PDBs), you are connected to the HR_PDB. You execute the following command:
SQL > CREATE UNDO TABLESPACE undotb01
DATAFILE 'u01/oracle/rddb1/undotbs01.dbf' SIZE 60M AUTOEXTEND ON;
What is the result?
A. It fails and reports an error because the CONTAINER=CURRENT clause is not specified in the command.
B. It fails and reports an error because the CONTAINER=ALL clause is not specified in the command.

C. It executes successfully but neither tablespace nor the data file is created.
D. It executes successfully and creates an UNDO tablespace in HR_PDB.
E. It falls and reports an error because there can be only one undo tablespace in a CDB.
Answer: C
Explanation:
Explanation
Interesting behavior in 12.1.0.1 DB of creating an undo tablespace in a PDB. With the new Multitenant architecture the undo tablespace resides at the CDB level and PDBs all share the same UNDO tablespace.
When the current container is a PDB, an attempt to create an undo tablespace fails without returning an error.

NEW QUESTION: 4
What does the HPE StoreVirtual solution provide?
A. scale-up storage
B. scale-out storage
C. SAN, NAS and object storage
D. file level storage
Answer: B
Explanation:
Explanation/Reference:
HPE StoreVirtual is a scale-out Storage for Virtualised Environments. It gives you affordable storage for a virtualised infrastructure solution that's easy to manage, supports continuous data growth and includes advanced high-availability features that keep you up and running.
