- A. Testing load considering 50% more call volume.
- B. Testing load considering 10xthe current call volume.
- C. Testing load considering half the call volume.
- D. Testing load considering current call volume.

Answer: A

NEW QUESTION: 2

Which Veritas Cluster Server (VCS) system attribute indicates whether the cluster runs in secure mode?

- A. ClusterMode
- B. SecureMode
- C. SecureCluster

D. SecureClus

Answer: D

NEW QUESTION: 3

You want to monitor the network infrastructure of a software-based company. The network infrastructure of the company consists of the following: Windows TCP/IP services Web and mail servers URLs Applications (MS Exchange, SQL etc.) Which of the following network monitoring solutions can you use to accomplish the task?

- A. CommandCenter NOC**
- B. Cymphonix Network Composer**
- C. Axence nVision**
- D. Netmon**

Answer: C

Explanation:

Axence nVision is an advanced solution for a comprehensive network management. It is used to monitor network infrastructure such as Windows, TCP/IP services, web and mail servers, URLs, and applications (MS Exchange, SQL, etc.). It is also used to monitor routers and switches such as network traffic, interface status, and connected computers. It collects the network inventory and audit license usage. It also gives alerts in case of a program installation or any configuration change on a remote node. With the agent, an administrator can easily monitor user activities and can access computers remotely.

Answer B is incorrect. CommandCenter NOC is a simple and effective tool that performs network monitoring with a powerful polling engine. It provides polling, Windows and UNIX/Linux server management, intrusion detection, vulnerability scanning, and traffic analysis in an integrated appliance. Answer D is incorrect. Cymphonix Network Composer is a precise Web gateway appliance. It is used to monitor Internet traffic by user, application, and threat. It consists of controls to shape access to Internet resources by user, group, and/or time of day. It also supports anonymous proxy blocking, policy management, and real time monitoring. Answer C is incorrect. Network Monitor (Netmon) is a protocol analyzer. It is used to analyze the network traffic. It is installed by default during the installation of the operating system. It can be installed by using Windows Components Wizard in the Add or Remove Programs tool in Control Panel. Network Monitor is used to perform the following tasks:

- 1.Capture frames directly from the network.
- 2.Display and filter captured frames immediately after capture or a later time.
- 3.Edit captured frames and transmit them on the network.
- 4.Capture frames from a remote computer.
