A. Create an XML download file.

B. From your computer, run `setup.exe /download downloadconfig.xml`.

C. From each client computer, run `setup.exe /configure installconfig.xml`.

D. From the Microsoft 365 admin center, configure the Software download settings.

E. From the Microsoft 365 admin center, deactivate the Office 365 licenses for all the users.

Answer: A,C,D

Explanation:

Explanation

You can use the Office Deployment Tool (ODT) to download the installation files for Office 365 ProPlus from a local source on your network instead of from the Office Content Delivery Network (CDN).

The first step is to create the configuration file. You can download an XML template file and modify that.

The next step to install Office 365 ProPlus is to run the ODT executable in configure mode with a reference to the configuration file you just saved. In the following example, the configuration file is named `installconfig.xml`. `setup.exe /configure installconfig.xml` After running the command, you should see the Office installation start.

To prevent the users from installing Office 365 ProPlus from the Internet, you need to configure the Software download settings (disallow downloads) in the Microsoft 365 admin center.
