NEW QUESTION: 2

Chaincode is a decentralized transactional program, running on the validating nodes. As with every chaincode, it implements the _____ in particular, Init and Invoke functions.

What does it actually implement?

- A. EVM
- B. Chaincode interface
- C. REST Interface
- D. SDK

Answer: B

Explanation:

Explanation

Chaincode is a decentralized transactional program, running on the validating nodes. As with every chaincode, it implements the Chaincode interface in particular, Init and Invoke functions. Init is called during Instantiate transaction after the chaincode container has been established for the first time, allowing the chaincode to initialize its internal data. Invoke is called to update or query the ledger in a proposal transaction. Updated state variables are not committed to the ledger until the transaction is committed.

NEW QUESTION: 3

HOTSPOT

You are a SharePoint administrator. You set up a publishing website that is based on product catalogue data. You are configuring Search to retrieve and display content from the publishing website. Content managers have site collection administrator permissions.

You need to ensure that multiple crawls can occur for the same content at the same time.

What should you do? To answer, select the appropriate value from each list in the answer area.

Answer:

Explanation:

NEW QUESTION: 4

Your company has a System Center 2012 infrastructure. The infrastructure contains the App Controller and Virtual Machine Manager (VMM) roles. You deploy a service named SRV1 to the production environment in the public cloud. You also deploy SRV1 to a staging environment in the public cloud. You perform upgrades to SRV1 in the staging environment.

You need to apply the upgrades from the staging environment to the production environment.

What should you do?

- A. From the VMM Administrator Console, create a new service.

- B. From the App Controller portal, perform an environment swap upgrade.
- C. From the App Controller portal, import an SSL certificate.
- D. From the VMM Administrator Console, create a new service template.
- E. From the VMM Administrator Console, create a new virtual machine template.

Answer: B

Explanation:

<http://technet.microsoft.com/en-us/library/hh221342.aspx>

Public cloud services can be upgraded in one of two ways: an environment swap or an in-place upgrade.

An environment swap places the staging environment into the production environment. As the swap occurs, the existing production environment is moved into the staging environment. An in-place upgrade replaces the existing binaries and settings with new binaries and settings.
