- D. 65x-3a»Ya, Šã•®ãf|ãf¼ã, ¶ãf¼ã•®ç™»éÉ²ã®Æã°†/ç™»éÉ²ã®Æã°†ã€ ,

Answer: D

NEW QUESTION: 4

In your multitenant container database (CDB) containing pluggable database (PDBs), you granted the CREATE TABLE privilege to the common user C ## A_ADMIN in root and all PDBs.

You execute the following command from the root container:
SQL > REVOKE create table FROM C ## A_ADMIN;

What is the result?

- A. It fails and reports an error because the CONTAINER=ALL clause is not used.
- B. It excludes successfully and the CREATE TABLE privilege is revoked from C ## A_ADMIN in root and all PDBs.
- C. It executes successfully and the CREATE TABLE privilege is revoked from C ## A_ADMIN in all PDBs.
- D. It executes successfully and the CREATE TABLE privilege is revoked from C ## A_ADMIN in root only.
- E. It fails and reports an error because the CONTAINER=CURRENT clause is not used.

Answer: D

Explanation:

REVOKE ..FROM

If the current container is the root:

/ Specify CONTAINER = CURRENT to revoke a locally granted system privilege, object privilege, or role from a common user or common role. The privilege or role is revoked from the user or role only in the root. This clause does not revoke privileges granted with CONTAINER = ALL.

/ Specify CONTAINER = ALL to revoke a commonly granted system privilege, object privilege on a common object, or role from a common user or common role. The privilege or role is revoked from the user or role across the entire CDB. This clause can revoke only a privilege or role granted with CONTAINER = ALL

from the specified common user or common role. This clause does not revoke privileges granted locally with CONTAINER = CURRENT. However, any locally granted privileges that depend on the commonly granted privilege being revoked are also revoked. If you omit this clause, then CONTAINER = CURRENT is the default.
